Axial Fans and Clutches

Smart Fan Technology

WingFan's core competence in aerodynamic engineering provides you with the most advanced technology to comply with noise and emissions legislations.

Every agricultural application has its unique requirements that have to be addressed individually. Our axial fan solutions for agricultural machinery and related applications are custom configured to minimize fuel consumption and provide optimal cooling with minimal fan noise.

Specialized agricultural machines require fans with enough performance reserves to deal with severe radiator fouling issues and the fan must be robust enough to withstand severe dust and debris ingress. WingFan has developed innovative fan blade geometries for the most challenging cooling applications for the world's largest OEM agricultural machinery manufacturers.

FanClutch solutions

Clutches control the fan speed in direct proportion to the engine cooling needs resulting in **improved fuel economy, lower cyclic fan noise** and **increased operator comfort**.

Choose from our highly advanced maintenance free electronic viscous clutches that can be precisely controlled by the ECU, or fully modulating bi-metal clutches that sense the temperature of the air passing through the heat exchanger for accurate fan engagement.

BLEX® the gap

With WingFan's BLEX® technology, the **static pressure is dramatically improved** and the noise may be reduced by 2 to 3 dB(A). The **noise at the fan blade tips** caused by air slippage and turbulence **is significantly reduced** due to minimized tip clearances.

The same air flow can be achieved while reducing pitch angle and fan speed, thus lowering power consumption. The overall **system efficiency is increased** by up to 20% resulting in significant **fuel/energy savings**.

The flexible nylon fabric is designed to adapt the fan diameter to the contour of the shroud thereby reducing the clearance close to ZeroTip®.

All regular blade profiles in the WingFan product range made of PA and PAG material are available with state-of-the-art BLEX® technology.

Forage Harvester

Toughest materials for the roughest environment

WingFan's extra heavy duty fans can be found cooling many of the world's most powerful forage harvesters. The unique difficulties in cooling the 450 to 1100 hp engines while the harvesters

traverse rough terrain at speed require the toughest materials and the most advanced fan designs to withstand the high vibration, gyroscopic forces and extreme temperatures.

Better efficiency and fuel economy

The high efficiency of the **P8Y** measurably reduces the fuel consumption while providing ample cooling airflow at full engine power even in the hottest climates. The low projected width of the P8Y allows the fan to be mounted in the most cramped engine bays.

Robust and powerful

The **P9T**, the most robust fan in the Wing-Fan range has the performance to cool the most powerful engines with a maximum fan diameter of 1980 mm. Minimum deflection is ensured due to the heavy duty design of the blade and hub.

Smart Fan Selection Software

We make things easier for you!

WingFan SELECT 3D, the leading fan selection software in the industry, is the best tool to **support your fan sizing**. Learn about the unique features like 3D visualization, resonance data, project management or 3D file export.

Free download at
wingfan.com

3D Visualization

The feature create highly accurate 3D visualizations to show what the fan configuration will look like once completed.

Resonance Check

This particular feature identify and/or confirm a high vibration level caused by a resonance frequency caused by the chosen fan speed.

Performance Data

The feature is intended to provide an overview of the performance of the selected fan and its parameters.

3D Animation

Automated 3D Animation provides a faster way to easily visualize the function and behavior of your fan configuration.

Drawing Export

Each individual fan selection can be exported as a technical drawing to the Portable Document Format (PDF).

3D File Export

An important function in the data exchange relationship between the SELECT and CAD worlds is the ability to port the Fan assembly into mechanical design software for the purposes of physical clearance checking.

WE DELIVER TO ALL FIVE CONTINENTS

We think global and act local!

WingFan with its headquarters in Hamburg, Germany is operating a global network of manufacturing on 5 continents and distribution in over 36 countries.

WingFan also offers phone support for your product and technical questions. To discuss a specific application, specification question or request a prototype, contact the WingFan location closest to you.
